Kintara (NASDAQ/KTRA)
February 1, 2021
BUY: VAL-083 Potential in GBM - Raising PT from \$4 to \$5
Jason H. Kolbert
Head of Healthcare Research
646-465-6891
jkolbert@dawsonjames.com

We recently reviewed the "Global Coalition for Adaptive Research (GCAR) study" and concluded that the study may open VAL-083 to a larger GBM market opportunity, the result of the increased market opportunity when filtered through our model and assumptions is an increase in our target valuation from \$4.00 to \$5.00.

Investment Highlights

VAL-083 - The Trifecta. Kintara's VAL-083 is the only compound in the study that is going to be evaluated in all three major cancer types: 1. Newly diagnosed unmethylated (NDUM), 2. recurrent GBM, and 3. newly diagnosed methylated MGMT (the first compound under evaluation for this cancer). Factoring in this market opportunity drives an increase in our target valuation from \$4.00 to \$5.00.

The Global Coalition for Adaptive Research, or GCAR Adaptive Study. The study plans to enroll 150-200 patients in each arm, so with control, this is an 800-plus patient study: three arms, three sponsors, plus control. Each company will evaluate its respective therapeutic, but only VAL-083 will be evaluated in three active arms. Futility will be evaluated at n=50, 100 and 150 patients, and efficacy will be evaluated at n=100 and 150 patients before the adaptive design transitions to pivotal phase.

Don't Forget the Other Asset - REM-001. This is a three-part therapy: a laser light source, a light delivery device, and the drug REM-001. REM-001 is a second-generation photosensitizer under development for unresectable cutaneous metastatic breast cancer (CMBC). This disease affects women with advanced breast cancer, where treatment options are limited. For this and similar cutaneous applications, the light delivery device is a simple and easy to use fiber optic wand that the physician employs to illuminate the tumor with light directly.

Valuation. Our valuation is driven by our revenue projections for VAL-083 (GBM) and REM-001 for CMBC. For both indications, we apply a risk cut in our model (70%), which flows into our income statement. We model both products out to 2030. Our models also factor in the increase in shares from the merger as well as future assumed dilution, based on a fully diluted 2030 share count. We triangulate FCFE, discounted EPS, and sum-of-the-parts models. We then average and equally weight each model to derive an NPV, which is rounded to the nearest whole number to calculate our target price.

Risk to our thesis includes the following: (1) commercial; (2) regulatory; (3) clinical; (4) manufacturing; (5) financial; (6) liability; and (7) intellectual property.

VAL-083 in Glioblastoma. Recent news that the Global Coalition for Adaptive Research (GCAR) plans to include VAL-083 in its Glioblastoma Adaptive Global Innovative Learning Environment (GBM AGILE) Study is positive.

- **The study is designed** as an adaptive clinical trial platform in glioblastoma multiforme (GBM). Kintara plans to utilize the GBM AGILE study to serve as the basis for VAL-083's new drug application (NDA) submission and registration.
- **What is it?** GBM AGILE is an international effort in newly diagnosed and recurrent GBM (both indications where VAL-083 has shown activity). The trial utilizes "an FDA approved master protocol" with multiple drugs to be tested simultaneously and over time against a common control arm.
- **As an approved registrational study,** results from the VAL-083 arm of GBM AGILE are intended to be utilized to file for FDA approval. This study employs a cost-efficient, adaptive trial design with a Stage 1 (Phase 2) learning and adapting phase and a Stage 2 (Phase 3) expansion and confirmation phase.
- **KOL-Led Effort:** The effort is led by top-tier key opinion leaders in the GBM field and has the collective support of an international group of more than 130 clinicians, researchers, biostatisticians, imagers, pathologists, leaders from government and industry, and patient advocates.

Source: Dawson James estimates

Valuation. Our valuation is driven by our revenue projections for VAL-083 for its main indication in Glioblastoma Multiforme and now includes REM-001. We do not model any revenues from the GBM program until 2024 and CMBC in 2023. We note that good data from the GCAR study could create a faster pathway to the marketplace. We project our model through the year 2030. Our models factor in funding (dilution) using a fully diluted 2030 share count. We triangulate FCFF, discounted EPS, and sum-of-the-parts models. We then average and equally weight each model to derive an NPV, which is rounded to the nearest whole number to calculate our target price. Investors should recognize that this modeling exercise, which models for ten years while projected based on the current data and estimates, is limited in its ability to predict a 12-month target. The price of the stock will ultimately be driven near-term by factors such as news flow, new trial data, and cyclic concerns of financings (dilution).

Risk Analysis

Clinical and regulatory risk. Kintara Therapeutics is currently in Phase 2 clinical trials in both applications of its pipeline product focused on MGMT-unmethylated GBM. There is no assurance that its product will be approved for any additional indications and, even if approved, will be reimbursed by insurance or successfully commercialized.

Commercial risk. The focus of the Company is on successfully developing its products and eventually bringing them to the mass market. It is important to note that the market opportunity in MGMT-unmethylated GMB is large, and if successful, VAL-083 may be introduced to the market for multiple cancer applications. We can make no assurances that the Company will be able to achieve a critical level of market share to become profitable in this indication and/or in additional planned indications.

Employee risk. Kintara Therapeutics has an experienced management team in its President and CEO, CSO, and CFO. Kintara Therapeutics plans to bring its proposed products to reality. Kintara Therapeutics's success will depend, to a great extent, upon the experience, abilities and continued services of its senior officers, sales staff, and key scientific personnel.

Financial risk. The Company may need to raise capital in the marketplace relatively soon, and there can be no assurances that the Company will be able to raise capital and do so on favorable terms successfully.

Intellectual property risk. The Company may have to defend its patents and technical know-how, and there can be no assurances that the patents will not be infringed or will be held as valid if challenged, and the Company may infringe on third parties' patents.

Reimbursement and insurance payment risk. Insurance payment for products may be an additional hurdle for adoption.

Dawson James Securities, Inc. (the “Firm”) is a member of the Financial Industry Regulatory Authority (“FINRA”) and the Securities Investor Protection Corporation (“SIPC”).

The Firm does not make a market in the securities of the subject Company(s). The Firm has not engaged in investment banking relationships with the subject company in the prior twelve months, as a manager or co-manager of a public offering and has received compensation resulting from those relationships. The Firm may seek compensation for investment banking services in the future from the subject Company(s). The Firm has received other compensation from the subject Company(s) in the last 12 months for services unrelated to managing or co-managing of a public offering.

Neither the research analyst(s) whose name appears on this report nor any member of his (their) household is an officer, director or advisory board member of these companies. The Firm and/or its directors and employees may own securities of the Company(s) in this report and may increase or decrease holdings in the future. As of January 31, 2021, the Firm as a whole did not beneficially own 1% or more of any class of common equity securities of the subject company(s) of this report. The Firm, its officers, directors, analysts or employees may affect transactions in and have long or short positions in the securities (or options or warrants related to those securities) of the Company(s) subject to this report. The Firm may affect transactions as principal or agent in those securities.

Analysts receive no direct compensation in connection with the Firm's investment banking business. All Firm employees, including the analyst(s) responsible for preparing this report, may be eligible to receive non-product or service-specific monetary bonus compensation that is based upon various factors, including total revenues of the Firm and its affiliates as well as a portion of the proceeds from a broad pool of investment vehicles consisting of components of the compensation generated by investment banking activities, including but not limited to shares of stock and/or warrants, which may or may not include the securities referenced in this report.

Although the statements in this report have been obtained from and are based upon recognized statistical services, issuer reports or communications, or other sources that the Firm believes to be reliable, we cannot guarantee their accuracy. All opinions and estimates included in this report constitute the analyst's judgment as of the date of this report and are subject to change without notice.

Information about valuation methods and risks can be found in the "VALUATION" and "RISK ANALYSIS" sections of this report.

The securities of the Company discussed in this report may be unsuitable for investors depending on their specific investment objectives and financial position. This report is offered for informational purposes only and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction where such would be prohibited. Additional information is available upon request.

Ratings Definitions:

- 1) **Buy:** The analyst believes the price of the stock will appreciate and produce a total return of at least 20% over the next 12-18 months;
- 2) **Neutral:** The analyst believes the price of the stock is fairly valued for the next 12-18 months;
- 3) **Sell:** The analyst believes the price of the stock will decline by at least 20% over the next 12-18 months and should be sold.

The following chart reflects the range of current research report ratings for all companies, followed by the analysts of the Firm. The chart also reflects the research report ratings relating to those companies for which the Firm has performed investment banking services.

Ratings Distribution	Company Coverage		Investment Banking	
	# of Companies	% of Total	# of Companies	% of Totals
Market Outperform (Buy)	23	79%	3	13%
Market Perform (Neutral)	6	21%	0	0%
Market Underperform (Sell)	0	0%	0	0%
Total	29	100%	3	10%

Analyst Certification:

The analyst(s) whose name appears on this research report certifies that 1) all of the views expressed in this report accurately reflect his (their) personal views about any and all of the subject securities or issuers discussed; and 2) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst in this research report; and 3) all Dawson James employees, including the analyst(s) responsible for preparing this research report, may be eligible to receive non-product or service-specific monetary bonus compensation that is based upon various factors, including total revenues of Dawson James and its affiliates as well as a portion of the proceeds from a broad pool of investment vehicles consisting of components of the compensation generated by investment banking activities, including but not limited to shares of stock and/or warrants, which may or may not include the securities referenced in this report.
