BUY: A Star is Born - Pivotal P3 Trial Begins

CytoSorbents announces conditional approval of its investigational device exemption (IDE) application for the U.S. Safe and Timely Antithrombotic Removal - Ticagrelor (STAR-T) randomized, controlled trial. Based on this conditional approval, study initiation activities, including clinical trial agreement negotiations and institutional review board (IRB) submissions can now commence, putting the study ahead of the company's internal schedule.

Investment Highlights

A STAR is Born. The company has already identified and pre-screened many high-quality U.S. clinical centers that have indicated strong interest to participate in the STAR-T trial. The company believes conditions for full IDE approval can be appropriately addressed within the 45-day timeframe outlined by the FDA, and once accepted, the company expects to provide additional detail on the trial.

The U.S. market for therapy for the removal of the direct oral anticoagulants (DOACs) in emergent or urgent cardiothoracic surgery includes blockbuster anticoagulant medications such as the Factor Xa inhibitors – Eliquis® (apixaban; Pfizer, Bristol Myers Squibb), Xarelto® (rivaroxaban; Janssen, Bayer), and Lixiana® and Savaysa® (edoxaban; Daiichi Sankyo, Daewoong Pharmaceutical), as well as the direct thrombin inhibitors such as Pradaxa (dabigatran; Boehringer Ingelheim). As with ticagrelor, these blood thinners are also often associated with severe to life-threatening perioperative bleeding after cardiothoracic surgery. We anticipate that the clinical and regulatory pathway will be similar to that for ticagrelor. The Company's technology has shown the ability to remove all of these agents in vitro, and in the case of rivaroxaban and apixaban, in humans during cardiac surgery. This application would target an additional total addressable market in the U.S. alone of approximately \$500M.

Valuation. We use a series of therapeutic models across the various indications and geographies and project product revenues for the Company out to the year 2030. In our U.S. therapeutic models, we apply a 30% risk cut (70% success probability) that both U.S. approvals and our market share forecasts can be realized. For us, valuation becomes an interesting question when we discuss the appropriate "r" risk-rate to use in our three-model metrics, free cash flow to the Firm (FCFF), Discounted EPS, and Sum-Of-The-Parts (SOP) models, which are equal-weighted, averaged and rounded to the nearest whole number. Typically for early-stage companies with no revenues, we use 30%, and for companies with established products and revenues, we use a lower 15%. CytoSorbents arguably is somewhere in the middle, as products are approved and selling in Europe but not yet in the U.S. If we select a conservative 30%, we derive a \$9.00 price target. If we select a more aggressive 15%, we arrive at a \$26.00 target. We select a mid-point (22.5%) to derive a \$16.00 target, which reflects the revised share count from the recent capital raise.

Risks. Market risks, Regulatory risks, Financial risks, and Commercialization risks.
