Dyadic (DYAI-NASDAQ) – Buy-Rated

May 26, 2021

Jason H. Kolbert

Head of Healthcare Research

646-465-6891

Dyadic Announces a Collaboration with Syngene (Biocon)

Dyadic entered into a collaboration with Syngene International Limited ("Syngene"), an Indian integrated research, development, and manufacturing services company - actually part of Biocon, one of the largest manufacturers. The goal is to develop a COVID-19 vaccine candidate that can protect against the emerging variants at a highly efficient scale. If Dyadic could collect \$0.10 cents per dose and this Indian maker produces a billion doses, that equates to \$100M in potential future revenues.

Investment Highlights

Covid Update. Dyadic is working with multiple different groups on vaccine development, including Syngene (Biocon) – India. We know the company has developed a COVID-19 vaccine antigen from its C1 cell line that can be produced at three grams per liter (3 g/l) in only five days, a significantly larger scale than traditional methods. Given the need for doses in the billion-plus range, this technology could make a real difference. Given the news that a candidate is now selected and advancing to trials, we are hopeful that the C1 platform will become part of a future COVID vaccine. However, we recognize that the landscape is maturing.

In addition to Syngene, Dyadic also has two non-exclusive research license agreements, which include WuXi Biologics, to continue their C1 research projects in a CDMO and manufacturing environment at their own facilities. There have also been some advances in animal health, too, and multiple early-stage collaborations in human health. We are hopeful that in time, the company can advance and monetize some of the agreements.

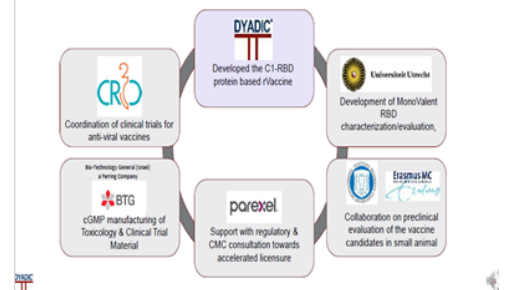

Valuation: If we flip a coin four times, the reality is we have no idea how many times it will be heads vs. tails. The same thing is true in terms of our ability to predict the next partnership or license deal. With that said, if we flip a coin a hundred times, we can expect about half of the tosses to be heads (or tails). For Dyadic, we broadly evaluate the utility of the C1 platform across several market segments such as the Pharma and Biotechnology areas, Biosimilars, Vaccines, and Industrial markets. For this modeling exercise, we apply a +/- 80% discount (or 20% +/- the probability of success) factor to determine the revenue stream. This discount is in addition to our (r) discount rate that we use in our Free Cash Flow to the Firm (FCFF), discounted EPS (dEPS), and Sum of the Parts (SOP) models. For this rate, we select $r = 15\%$. Our model uses a fully diluted projected out-year (2030) share count. Our three models (FCFF, dEPS, and SOP) are then equal-weighted, averaged, and rounded to the nearest whole number to derive our 12-month price target of \$6.00.

Risks include: Partnership, commercialization, financial, clinical and regulatory, and legal and intellectual property.

Current Price **\$4.07**
Price Target **\$6.00**

Phase I with C1-cell SARS-CoV-2 RBD Recombinant Vaccine in 2021

Initiate cGMP manufacturing, conducting toxicology, initiating and completion of an anticipated Human Phase I Clinical Trial Of a C1 produced SARS-CoV-2 vaccine candidate. Prove Safety & Efficacy In Humans

Israel is Interested. IIBR appears to be working with Dyadic to explore the potential of the C1 gene expression platform to express gene sequences and targets developed by IIBR. The research collaboration can combine IIBR's scientific capabilities and cGMP facilities with Dyadic's C1 gene expression platform to shorten the development cycle, lower the manufacturing cost, and improve the performance of vaccines and mAbs. Beyond Corona, the idea has been to be in a position to provide certain countermeasures against nerve agents such as sarin and VX gas, which are toxic and rapidly acting chemical warfare agents. The application of the C1 technology platform with Israeli and other government agencies (EU/U.S.) could help with the need to combat emerging biologic outbreaks, pandemics, epidemics, or other threats to national security and defense.

ZAPI Project. Dyadic has developed a biomanufacturing technology platform, nicknamed C1, which helps to speed the development, lower the manufacturing cost, and potentially improve the performance of biologic vaccines & drugs, including vaccines against zoonotic diseases. For the past five years plus, Dyadic has been working with other pharmaceutical and biotech companies, universities and other institutes in the European Union Zoonotic Anticipation and Preparedness Initiative (ZAPI) Project, intending to create new platforms and technologies that will facilitate a fast, coordinated, and practical response to new animal and human infectious diseases, such as the Coronavirus, as soon as they emerge.

Sanofi (SNA- Not Rated). Dyadic is commercially working with Sanofi and various other top twenty-five pharma & biotech companies, as well as The Serum Institute of India, to further improve and apply the C1 gene expression platform to accelerate development, lower production costs and improve the performance of biologic vaccines, drugs, and other biologic products, at flexible commercial scales to make healthcare more accessible & affordable to patients globally.

The Serum Institute of India. It is a for-profit company and the world's largest vaccine manufacturer by the number of doses produced and sold globally (more than 1.5 billion doses), which includes a Polio vaccine as well as Diphtheria, Tetanus, Pertussis, Hib, BCG, r-Hepatitis B, Measles, Mumps, and Rubella vaccines. It's estimated that about 65% of the children in the world receive at least one vaccine manufactured by Serum Institute. Vaccines manufactured by the Serum Institute are accredited by the World Health Organization, Geneva. They are being used in around 170 countries across the globe in their national immunization programs, saving millions of lives throughout the world.

Product Modeling Assumptions. Dyadic is a platform company based on its C1 technology. The company's strategy, at this point in its evolution, is to pursue license and royalty structured deals across several focus areas, which include:

- a. **Large Pharma and Biotechnology companies** that have products in early stages of development, so much so that they can leverage the C1 manufacturing process (as more efficient, more cost-effective) early in the scale-up process.
- b. **Biosimilars.** We see "generic biologics" as a new and emerging industry. The industry is only partially focused on managing production costs. This is because makers' first priority has been to demonstrate that the manufactured product is truly the same as the brand. As the industry matures, we see the possibility of two key factors that may change, both of which could favor Dyadic.
 - i. The industry will ultimately compete on price, so makers with the lowest manufacturing cost will have a strategic advantage.
 - ii. Intellectual Property Infringement. Brand companies have already pursued IP infringement to prevent generic biosimilars from entering the market. One key area is to claim infringement on the manufacturing process itself. By shifting to a C1 (Dyadic) process, companies would not be infringing on the brand makers' processes.
- c. **Vaccine Industry.** Dyadic currently has a partnership deal (milestones and royalties) with the Serum Institute of India. The arrangement allows Serum to select up to 12 additional projects.
 - i. We assume that the rising demand for cheaper and faster production of vaccines only continues to rise with time. The global need is great, and in emerging countries, cost-effective production is critical. As Dyadic demonstrates success in the industry, we expect additional vaccine makers to utilize the C1 platform.
- d. **Industrial Industry.** Dyadic's first production was to move the denim jeans "stone-washed" blue jeans away from using stones to using C1 product methods. Multiple industrial processes could benefit from cost-effective production methods. We know that Dyadic has worked with the petroleum industry, although Dupont acquired that technology in a \$75M deal with the company.

Exhibit 1. Market Models: For the purposes of modeling, we assume Dyadic will focus on a few key areas.
Industrial Enzymes Production

Valuation. If we flip a coin four times, the reality is we have no idea how many times it will be heads vs. tails. The same thing is true in terms of our ability to predict the next partnership or license deal Dyadic may announce. With that said, if we flip a coin a hundred times, we can expect about half of the tosses to be heads (or tails). For Dyadic, we broadly evaluate the utility of the C1 platform across multiple market segments. Pharma and Biotechnology, Biosimilars, Vaccines, and Industrial markets. We assume a number of possible deals over the next ten years, in each of the three segments, or 24 possible revenue streams, each with their own milestones and royalties. We know it's unlikely that the company will achieve all 24 deals, and we also believe it's equally unlikely they will have no new deals (given the existing track record). For this modeling exercise, we apply an 80% discount (or 20% probability of success) factor to determine the revenue stream. This discount is in addition to our (r) discount rate that we use in our Free Cash Flow to the Firm (FCFF), discounted EPS (dEPS), and Sum of the Parts (SOP) models. For this rate, we select $r = 15\%$. Our model uses a fully diluted projected out-year (2030) share count. Our three models (FCFF, dEPS, and SOP) are then equal-weighted, averaged, and rounded to the nearest whole number to derive our 12-month price target of \$6.00.

Risk Analysis

In addition to the typical risks associated with development stage technology and biotechnology-related companies, potential risks specific to Dyadic are as follows:

Partnership risk. The company is also expected to make agreements with partners for additional products, but there can be no assurances that the company will be able to secure favorable partnerships.

Commercial risk. There are no assurances that the company will be able to achieve significant sales, market share, or become profitable.

Clinical and regulatory risk. Dyadic may pursue the development of its products and face the associated regulatory risks.

Financial risk. The company may need to raise capital in the marketplace, and there can be no assurances that the company will be able to successfully raise capital and or do so at favorable terms.

Legal and intellectual property risk. The company may have to defend its patents and technical know-how, and there can be no assurances that the patents will not be infringed or will be held as valid if challenged, and/or that the company may infringe on third parties' patents.

Dawson James Securities, Inc. (the “Firm”) is a member of the Financial Industry Regulatory Authority (“FINRA”) and the Securities Investor Protection Corporation (“SIPC”).

The Firm does not make a market in the securities of the subject company(s). The Firm has NOT engaged in investment banking relationships with DYAI in the prior twelve months, as a manager or co-manager of a public offering and has NOT received compensation resulting from those relationships. The Firm may seek compensation for investment banking services in the future from the subject company(s). The Firm has NOT received other compensation from the subject company(s) in the last 12 months for services unrelated to managing or co-managing of a public offering.

Neither the research analyst(s) whose name appears on this report nor any member of his (their) household is an officer, director, or advisory board member of these companies. The Firm and/or its directors and employees may own securities of the company(s) in this report and may increase or decrease holdings in the future. As of April 30, 2021, the Firm as a whole did not beneficially own 1% or more of any class of common equity securities of the subject company(s) of this report. The Firm, its officers, directors, analysts or

employees may affect transactions in and have long or short positions in the securities (or options or warrants related to those securities) of the company(s) subject to this report. The Firm may affect transactions as principal or agent in those securities.

Analysts receive no direct compensation in connection with the Firm's investment banking business. All Firm employees, including the analyst(s) responsible for preparing this report, may be eligible to receive non-product or service specific monetary bonus compensation that is based upon various factors, including total revenues of the Firm and its affiliates as well as a portion of the proceeds from a broad pool of investment vehicles consisting of components of the compensation generated by investment banking activities, including but not limited to shares of stock and/or warrants, which may or may not include the securities referenced in this report.

Although the statements in this report have been obtained from and are based upon recognized statistical services, issuer reports or communications, or other sources that the Firm believes to be reliable, we cannot guarantee their accuracy. All opinions and estimates included in this report constitute the analyst's judgment as of the date of this report and are subject to change without notice.

Information about valuation methods and risks can be found in the "VALUATION" and "RISK ANALYSIS" sections of this report.

The securities of the company discussed in this report may be unsuitable for investors depending on their specific investment objectives and financial position. This report is offered for informational purposes only and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction where such would be prohibited. Additional information is available upon request.

Ratings Definitions:

- 1) **Buy:** The analyst believes the price of the stock will appreciate and produce a total return of at least 20% over the next 12-18 months;
- 2) **Neutral:** The analyst believes the price of the stock is fairly valued for the next 12-18 months;
- 3) **Sell:** The analyst believes the price of the stock will decline by at least 20% over the next 12-18 months and should be sold.

The following chart reflects the range of current research report ratings for all companies followed by the analysts of the Firm. The chart also reflects the research report ratings relating to those companies for which the Firm has performed investment banking services.

As of: 17-May-21

Ratings Distribution	Company Coverage		Investment Banking	
	# of Companies	% of Total	# of Companies	% of Totals
Market Outperform (Buy)	24	71%	5	21%
Market Perform (Neutral)	10	29%	0	0%
Market Underperform (Sell)	0	0%	0	0%
Total	34	100%	5	15%

Analyst Certification:

The analyst(s) whose name appears on this research report certifies that 1) all of the views expressed in this report accurately reflect his (their) personal views about any and all of the subject securities or issuers discussed; and 2) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst in this research report; and 3) all Dawson James employees, including the analyst(s) responsible for preparing this research report, may be eligible to receive non-product or service specific monetary bonus compensation that is based upon various factors, including total revenues of Dawson James and its affiliates as well as a portion of the proceeds from a broad pool of investment vehicles consisting of components of the compensation generated by investment banking activities, including but not limited to shares of stock and/or warrants, which may or may not include the securities referenced in this report.
