Check-Cap (NASDAQ/CHEK) – Neutral

December 8, 2022

Check-Cap – Reports 3rd Quarter and Effects a 1 for 10 Reverse Stock Split, We Remain Neutral

Jason Kolbert
Managing Director & Senior Analyst
jkolbert@dawsonjames.com

Check-Cap reported 3rd Quarter results spending \$4.7M in the period and closing with \$46M in cash and equivalents. The company reversed the stock 1:10. It's been our experience that microcap stocks typically do not rebound for some time after a reverse stock split. This, along with clinical trial delays, supports our neutral rating for the moment.

Investment Highlights

Delays continue to plague the Pivotal trial. The company has begun the first part of the U.S. pivotal study but enrollment, patient recruitment, is stated as “slow”. Recall that the first part of the study plans to focus on device calibration and enhancement of C-Scan algorithms. The company is enrolling average-risk patients in Israel, to further optimize C-Scan functionality and the patient experience. The required lead time to activate new sites as well as to recruit patients in the U.S. has been longer than expected. The Company is continuing to work on activating new sites while at the same time calibrating the C-Scan device and its algorithms. Assuming sites' activation and calibration proceeds as planned, the Company expects the second part of the U.S. pivotal study to start in mid-2023.

Europe too: In late 2021, the European Medical Device Regulation (MDR) issued a renewal of the Company's C.E. mark approval for an additional five years. The updated MDR CE approval permits Check-Cap to commercialize C-Scan in Europe. The renewal enables the company to continue to explore opportunities to launch C-Scan in other international markets.

Valuation. Our valuation is based on the assumed success of the E.U. and U.S. launches of Check-Cap's imaging capsule. We use a 30% probability of success for the E.U. and U.S. approvals and commercialization. The product revenue models then flow into our income statement, which is projected out to 2030. On top of these therapeutic success probabilities, we apply a discount rate (r) of 30% (our highest rate for emerging growth companies), and we assume additional capital raises (dilution) in our final projected fully diluted share count of 160M (2030). We then apply these projections to our Free Cash Flow to the Firm or FCFF, discounted EPS or dEPS, and sum-of-the-parts or SOP models, which are equal-weighted, averaged, and rounded to the nearest whole number to derive our 12-month price target. These metrics point to fair value in the \$4-\$5 range, which supports our Neutral rating.

Risk Factors: These include clinical, investment and financial, regulatory, intellectual property, and commercial risk.

Current Price **\$3.52**
Price Target **NA**

Risk Analysis

Clinical Trial Risk. Check-Cap is dependent on the outcome of multiple clinical trials.

Commercial Risk. Check-Cap hopes to initially commercialize the device in Europe and Israel, followed by the U.S. There can be no assurances that the company can achieve meaningful market share.

Financial Risk. Check-Cap is likely to require additional capital raises before the company can be self-sustaining. There can be no guarantees that the company will be able to raise the needed capital.

Investment Risk. Check-Cap is a small capital company, which can translate into high volatility and risk for investors. The company has no revenues and is dependent on the clinical progress of the device.

Intellectual Property. Check-Cap may face I.P. challenges, forcing the company to defend its patents or against claims that the company is infringing on other patents.

Regulatory Risk. Check-Cap, even with good clinical data, could face extensive delays and other regulatory setbacks.
